

WHAT IS CLAIMED IS:

1. A lamp shade, comprising:

a shade having two opposite sides separated from each other; and

a fastening device mounted on the shade for combining the two

5 opposite sides of the shade together.

2. The lamp shade in accordance with claim 1, wherein the shade is

foldable.

3. The lamp shade in accordance with claim 2, wherein the shade has

a loop shape when being folded.

10 4. The lamp shade in accordance with claim 1, wherein the shade has

a planar shape when being expanded.

5. The lamp shade in accordance with claim 1, wherein the fastening

device includes two chains each mounted on a respective one of the two

opposite sides of the shade, and a slide slidably mounted on either one of the

15 two chains to combine the two chains together, so that the two opposite sides of

the shade are combined together, thereby forming a loop-shaped shade.

6. The lamp shade in accordance with claim 1, wherein the fastening

device includes two bonding straps each mounted on a respective one of the

two opposite sides of the shade, and the bonding straps are combined together,

20 so that the two opposite sides of the shade are combined together, thereby

forming a loop-shaped shade.

7. The lamp shade in accordance with claim 1, wherein the shade has a first end formed with a plurality of first elastic locking plates and a second end formed with a plurality of second elastic locking plates, and the lamp shade further comprises an upper ring mounted on the first end of the shade and having a rim locked by the first elastic locking plates of the shade, and a lower ring mounted on the second end of the shade and locked by the second elastic locking plates of the shade.
